## FAKE IDENTIFICATION LAWS

Despite of taking all the safety measures to cut down the crimes related to thefts of identity, fake representation; it is very surprising the crimes are increasing and the fake IDs are being sold as hot cakes on the internet due to its high demand. The illegal business of making fake IDs which are produced deliberately for misrepresentation to whip away another individual's identity is wrong from the law point of view and can consist either felony which is making and selling of fake IDs or the lesser charge of misdemeanor which is basically using a fake ID for any public purpose.

The original IDs are the academic property of the organization that create and own the copyright of the designs. In forgery case, replicating act of original/official documents is regarded as a very serious crime and in many countries the criminals are treated with legal charges.

The 9/11 attacks has brought forward the gap in security and issue of fake licenses in United States. Reports also reveal the terrorists who were involved in 9/11 attacks had valid driving license under fake identities. After this incident government have become more vigilant and try to control the rising events of fraud of identity which includes fake IDs relevant to laws of the state/ordinances, especially enforcement of alcohol laws. It is true that the fake practices have become threats to the security of the nation and they are functioning on the proposal to provide documents of identification like social cards, Driving license and ID card of the State which are difficult with federal/state agencies.

Original Identity cards are not accepted in most of the states as it is considered as a form of profligacy. A minor who possess bogus state identity cards/original IDs/ possess someone else's driving license has to undergo 1 year driving suspension without convicting. Alternatively, carrying out a bogus ID online in US states is illegal and person caught with these ID will be charged instantly under criminal act. In UK and parts of Europe, engaging in design or manufacturing and selling of original bogus IDs is legal. Many companies in British sell these items with design copyright preserved by the manufacturer. But it is also believed parliament in British has suggested implementing identity of national card which can find out an individual's identity along with identity of national database. By using new technologies of fingerprinting scans and modern electronic devices, the system is believed to be foolproof and validate a person's identity to put away inherent limitations which are existed in biometrical technology.

In Britain, the law differs in using passport or driving license as ID proof. So, issuing of state of the art ID cards is believed to be impossible to match and less fake becomes sensible. In Toronto original bogus IDs are classic and there are number of original ID shops who operate this trade. For a price of \$40, one can order a shop to make original looking identity cards, produced by sheet of plastic Teslin with all necessary holograms and code. But Canada government does not encourage fraudulent activities and it's not illegal to manufacture these original IDs but the use and buyers' intention are illegal.
