THE CURIOUS CASE OF FAKE IDS

With the advancement of technology making of false ID cards is a very easy thing now. They are quite sophisticated. It has been largely possible because of the improved digital graphics, colour printing and image scanning. But with the use of same technologies the experts are now able to distinguish a fake ID from a genuine one.

But of late the forgers have found out a method of producing the fake IDs which is really tough to spot on. For that matter they are called as genuine fake IDs. They are same as the original ones. You can call them fake just for the method and means used to produce such a card. These kinds of cards are given out by the genuine producing and realising authorities.

When someone attempts to own a genuine fake ID, he applies for a genuine ID but supporting it with fake IDs and documents. As the documents required for such applications are quite easy to forge and acquire so the process becomes easy for him. In most of the cases they are not double-checked. The large quantity of applications helps the applicants with wrong intentions. So, by this process one can get a genuine ID with a fake process and documents. The amount of false information supplied varies with the kind of ID applied. The fake driver's license needs just a change in the date of birth and age. But other cards may require large scale of falsification of data submitted.

One safe way to apply for a genuine fake ID is to have an insider in the agency which is processing, producing and releasing your ID. This way you can decrease the risk of being caught during the scanning of supporting documents. The insider will take the responsibility to make your documents safely move through the security system. In some cases, you may not require any such documents. But existence and supplying of supporting documents will decrease the chances of suspicion on the insider and the applicant that is you.

As a lot of government employees earn low amounts as their salary so they are always on the lookout for some extra money. So, anyone trying to get a genuine fake ID bribe such people and get their work done. Sometimes even higher officials take bribe to pass a faulty application.

A sophisticated method of acquiring such genuine fake IDs is to temper with the database of the processing or issuing agency. By this method the stored information is modified to match with the submitted or targeted information. For that purpose the personal information of a baby or a dead person is used. Sometimes a living adult is robbed off his personal data by the forger. As the government data are stored in the internet so a technology savvy person or a hacker can temper with such information to get his work done.

Though these methods are quite expensive but for the sophisticated criminals these are easy tasks. So the government must innovate ways to tackle such crimes so as to control terrorist activities.
